Summary

Full-stack engineer specialized in building scalable web platforms with Laravel on the back-end and React/Next.js on the front-end. Experienced in system architecture, database design, and shipping production-ready codebases from concept to deployment, with a strong focus on maintainability and structured workflows.

8+ years of professional coding experience spanning native Android development (since 2016), web automation platforms, and, most recently, WordPress theme and plugin development.

Skills

- | | | |
|------------------|----------------|-------------|
| • Laravel | • Next.js | • React |
| • TypeScript | • JavaScript | • PHP |
| • Android (Java) | • React Native | • REST API |
| • Docker | • PostgreSQL | • WordPress |

Experience

WordPress Developer (Contract) — RTL-Theme.com

Mar 2026 – Present | Remote

- Developing and customizing WordPress themes and plugins for RTL marketplace.

Full-Stack Developer — Yekta Sazan Hakhamanesh

Apr 2026 – Jun 2026 (2 months) | Karaj, Iran

- Built an internal CRM to streamline personnel management and cross-team communication.
- Built a web app + Chrome extension that automated tracking of sales-team activity on ad platforms, cutting the company's ad spend by 30%.
- Built an internal AI content assistant on a company-specific knowledge base.

Senior Front-End Developer — Tchartr

Feb 2025 – Jan 2026 (11 months) | Tehran, Iran

- Built a whitelabel system enabling the company's partner travel agencies to launch branded booking apps.
- Unified web and native output from a single Next.js + Capacitor codebase for all partner agencies.
- Built a dynamic branding engine (logo, palette, theme) driven entirely by a single JSON config file, before a fresh build/output.
- Delivered flight, train, hotel, and car-rental booking flows with full i18n (Arabic, Persian, English).
- Designed a Data Layer and API Abstraction Layer unifying multiple third-party API responses into one frontend data model.
- Worked closely with backend and DevOps teams; designed a reusable, config-driven frontend architecture that cut time-to-release for new agency deployments.

Full-Stack Developer — Ahrar — ahraraudit.ir

Nov 2023 – Feb 2025 (1 yr 3 mo) | Tehran, Iran

- Built an internal automation platform that consolidated 80+ distinct auditing workflows into a single system spanning multiple organizational roles.
- Designed a worksheet abstraction layer supporting modular addition of new worksheet types, with 10 distinct system roles and separate permissions.
- Unit-tested every module and process.
- Laravel backend + Next.js/TypeScript frontend, containerized with Docker; PostgreSQL with optimized data models for fast, complex queries.
- Adopted by 120+ audited companies and 10,000+ worksheets processed; officially recognized as auditing software by Iran's Ministry of ICT.

Freelance Developer — Self-employed

Apr 2019 – Oct 2023 (4 yr 6 mo) | Karaj, Iran

- Delivered websites, Android apps, and web platforms on a project basis (notable projects listed under Projects).

Android Developer — Yekta Sazan Hakhamanesh

Sep 2018 – Apr 2019 (7 months) | Karaj, Iran

- Built the "Sabt Bazar" Android app; worked closely with the back-end team on the RESTful API integration.

Android Developer — Tchartr

Jun 2018 – Sep 2018 (4 months) | Karaj, Iran

- Built a native Android app in Java.

Projects

Meezban — Digital Menu Platform — meezban.net

- Multi-tenant SaaS platform for fast-to-deploy digital menus for restaurants and cafes. Laravel back-end, Next.js for dashboard/landing, React Native for the customer-facing app.
- 5 system roles per tenant; live order and table-call notifications via web-sockets and Laravel private broadcast; fully dynamic per-tenant branding.
- 30+ active businesses using the platform.

GeekChat — Open-Source Web Messenger — github.com/mahdi-g01/geek-chat

- Next.js frontend and Laravel API, with a custom Node.js build pipeline producing a release-ready, self-hostable source.
- Lightweight HTTP-based polling for a live chat experience without web-sockets or third-party services; optional end-to-end encryption; built-in captcha with no external dependency; a WordPress-like setup wizard; full admin panel.

Honors

- Top-GPA-band student throughout the associate's degree program — Sep 2025
- Gnote selected as a Cafe Bazaar featured app, 30,000+ users — 2019

Education

Associate's Degree, Computer Software Engineering — Islamic Azad University, Karaj

Feb 2024 – 2026 (expected) | GPA: 19.14 / 20

Languages

Persian — Native | English — Upper-Intermediate (strong written & technical communication)
